

Premere-Loc Insert Bearings

The TRITAN Premere-LOC Insert bearings and mounted units provide for quieter, smoother and more efficient operation, especially under higher radial loads. The concentric locking collar provides a uniform grip to the inner ring, leading to an operational true center line, reducing vibration at higher speeds. As well, the concentric locking force significantly reduces the chance of damaging the shaft.

These one-step easy installation inserts and units are ideal for bi-directional applications and can replace both set screw locking and eccentric collar locking bearings.
